

## Software Developer (m/w/d)

Frontend / Backend / Full Stack

You like to actively shape software and want to take on responsibility? You know front-end technologies like Javascript, Vue.js, React or Angular very well and/or you have experience with backend technologies like Spring or Django? You love clean code and if every detail is right? Then we are looking for you!

With our cloud platform, we help companies to discover their supply chains and make the ecological and social impact of their products visible and actionable. The deeper supply chain holds the majority of all greenhouse gas emissions and other social, political and environmental risks while only 6% of procurement leaders state to know what's going on. We are currently on a growth course and are further expanding our platform.

A highly innovative working environment awaits you with tasks in which you can help shape our platform. We are the first start-up worldwide to evaluate supply chains via graph databases and then calculate environmental evaluations in the form of footprints.

### What you can expect

- Work with the latest software technologies (Frontend Vue.js + Bulma, Backend Python + Django REST)
- Interesting challenges where you can demonstrate your software engineering skills
- A workplace in "Startplatz", the largest start-up incubator in NRW
- Flexible working hours in an interdisciplinary team and with the good feeling of getting up every day to do something to improve our planet.

### What you should bring

- You are open-minded and have quick comprehension skills
- Development experience, a love for clean code; you're not scared away from identifying, communicating, and tackling construction sites such as refactorings.
- An eye for innovative user interfaces (how could this process be optimally mapped in software?) and at the same time: pragmatism.
- experience in Python / Django or Vue.js is an advantage
- Very good communication skills including the ability to present complex facts in a simple way

### Interested?

We do not need extensive application documents. Simply send a short CV, references, a few lines on your motivation and your contact details, stating the earliest possible starting date, to [hello@sustainabill.de](mailto:hello@sustainabill.de)
